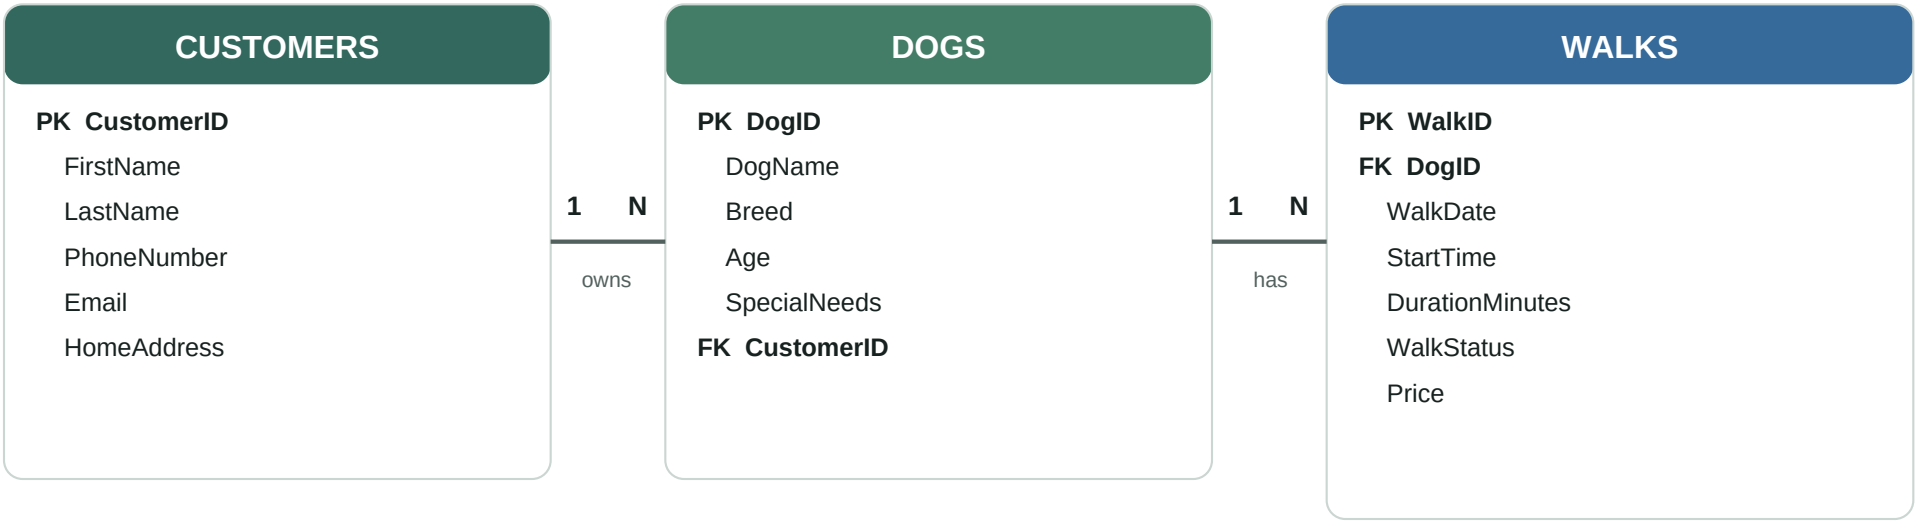
Lana's Dog-Walking Business

Draft Entity Relationship Diagram (ERD)



Relationship rules

- One customer can own many dogs; each dog is linked to one primary customer.
- One dog can have many walk records; each walk record is for one dog.
- PK = Primary Key (unique row ID); FK = Foreign Key (links to another table).

Draft assumptions

- Each walk record represents one dog being walked.
- If one appointment can include multiple dogs, consider adding a WALK_APPOINTMENTS table and a junction table.
- Consider storing date of birth instead of age, and define how price and duration are recorded.

Draft for learning purposes — confirm business rules before implementation.
